

April 2008 - FOR IMMEDIATE RELEASE

Gram Technology expands its Mold Making Alliance Group with the addition of Accede Mold & Tool Co., Inc.

Accede Mold & Tool Co., Inc, formed in late 1981, has grown into a world-class organization with corporate offices and manufacturing facilities in Rochester, NY and imminent plans for expansion.

Quality and customer satisfaction have always been the Company's primary objectives – The Accede Quality Management System has been registered to ISO-9000 since 1997 and in 2003 was upgraded to ISO 9001:2000.

Highly skilled and knowledgeable employees utilizing modern equipment have been the key to the Company's growth. A unique training program, established in 1993 for mold makers, machinists and designers, includes a fully structured six-year apprenticeship.

"When we are interviewing new Mold Making Alliance Group partners it typically takes some time for them to understand the principles of our SpinStack® technology, and for us to feel comfortable with the confidence and commitment of the potential partner." Comments Ron Cisliek, Director of Sales and Marketing of Gram Technology. "To our surprise Accede showed us understanding and commitment that we are looking for; in a very short time."

"Since we have the attention of industry leading OEM's and Custom Molders, it is critical that we ensure that our Mold Making Alliance Group partners are able to fulfill our current and future goals in a variety of global marketplaces and diverse industries." Continued Cisliek. "With Accede already in Medical and Consumer Packaging tooling in both single material and multi-shot, we see an ideal "fit" to many of our current application solutions."

Gram Technology is the inventor and developer of SpinStack®; a unique rotating multi mold technology that reduces overall manufacturing costs, affords faster cycle times and provides opportunities for adding product value - such as in-mold assembly.

SpinStack® is more than a molding technology; it is a unique approach to providing injection-molding solutions by investigating the required result and indentifying the most cost effective and efficient method of achieving completion.
