

June 2008

Univac Precision Engineering provides an experienced Asian component to the Gram Technology Mold Making Alliance Group.

Headquartered in Singapore and with manufacturing sites in China and Malaysia, Univac Precision Engineering are ideally positioned to expand Gram Technology projects into the Asian and Australasia markets; these requirements are currently being serviced by suppliers from other regions around the world. Univac has experience working with Global OEM's and Custom Molders on every continent and in a variety of markets from Consumer Packaging to Medical Products.

"We are delighted that we were able to find a organization in the Far East that has the managerial and production framework to execute our SpinStack® technology at the levels necessary to meet our customers' needs." Reports Ron Cisliek, Director of Sales and Marketing, Gram Technology. "We are confident that Univac has the knowledge in advanced tooling solutions and the skills to develop SpinStack® solutions for a variety of diverse applications. Having a resource partner in the Far East provides a logistical and cost advantageous benefit to our existing and potential customers. And we are comfortable with Univac's ability to maintain the highest level of confidentiality and IP protection demanded by Gram Technology."

Gram Technology is the inventor and developer of SpinStack®; a unique rotating multi mold technology that reduces overall manufacturing costs, affords faster cycle times and provides opportunities for adding product value - such as in-mold assembly.

SpinStack® is more than a molding technology; it is a unique approach to providing injection-molding solutions by investigating the required result and indentifying the most cost effective and efficient method of achieving completion.
